

1-to-2 flange connection to splitter

Overview

Split Flange Adapters convert Code 61 or Code 62 flange ports to JIC or O-Ring Face Seal (OFS) connections. Ranging in sizes from ½" up to 2", these adapters are a convenient way to replace expensive hose fittings. A split flange is a two-piece coupling designed to secure a specialized flanged head on a tube or hose assembly to a flat-faced port on a component. Flange connectors are intended for application in hydraulic systems on industrial and commercial products where it is desired to. It is commonly used when the interface forms of two sections of piping or equipment are inconsistent, or when it is necessary to connect a flange to a plain-end pipe. The information in the catalogue are not binding and in order to improve distribution, RFS Hydraulics Sdn Bhd reserves the right to make any change including size and pressure ratings considered necessary at any time and without prior notice.
