

19-inch Rebranded Edge Data Center

Overview

New EDGE Computing Data Center Rack: Fully air-conditioned, self-sufficient, certified early fire detection, optionally also available with fire extinguishing. Lehmann has designed a suitable server cabinet specifically for edge computing solutions, according to the motto Plug. Open19 defines standardised form factors for servers, power delivery, and cooling within any 19-inch rack — enabling plug-and-play hardware from multiple vendors, eliminating cabling complexity, and providing the foundation for next-generation liquid-cooled, high-density compute. Solving this puzzle is one of the big design goals behind Open19, the data center hardware standard born at LinkedIn that's now overseen by the non-profit Open19 Foundation. What if installing a server was so simple a delivery driver could do it?

What if you could simply keep a stack of replacement. SAN FRANCISCO, April 21, 2021 /PRNewswire/ -- The Linux Foundation, the nonprofit organization enabling mass innovation through open source, today announced it will host the Open19 Foundation, an open hardware platform for data center and edge hardware innovation.
