

40ge multimode optical module

Overview

The QFX-QSFP-40GE-SR4 40GBASE-SR4 MPO/MTP QSFP compatible with Juniper has a receiving function (receiver with 850nm) and a transmitting function (transmitter with 850nm) for the transmission of optical signals via multimode fiber, taking the respective transmission protocol into. This document provides an overall description of the CE12800 series switches hardware, helping you obtain detailed information about each chassis, power module, fan module, card, cable, and pluggable modules for interface. Digital diagnostics functions are available via an I2C interface, as specified by the QSFP+ MSA. The optical module has four independent full-duplex transceiver channels and is a four-channel small pluggable optical module. All our products are manufactured under strict quality control system, and Every module had been tested. This transceiver is a high performance module for short-range multi-lane data communication and interconnection applications.
