

96-core ODF patch panel fusion splicing

Overview

The 96 port fiber optic ODF is used in fiber cable management and organization applications, it has optional pre-installed adapters, and types include LC/SC/ST/FC. Fusion splicing and distributing can be operated in the same working panel of the 96 port fiber. This Patch panel can be equipped with MPO module box and splicing fiber methods, which are applied to high-density network solutions and splice fiber-distribution network solutions. LISA is a dedicated optical distribution frame that serves as a cross-connect point, while IANOS is a modular patch panel designed for integration into 19-inch racks. Optical fiber distribution frame (ODF) is used for the formation and distribution of the backbone optical cable in the optical fiber communication system, which can easily realize the connection, distribution and scheduling of optical fiber lines.
