## Overview

---

16,389 fiber optic direct burial installation fiber optic cable trench illustrations, drawings, stickers and clip-art are available royalty-free for download. Installing fiber underground is one of the most durable ways to protect a network's backbone — when it's done right. Direct-burial fiber cable eliminates the need for continuous conduit runs and can be faster and more cost-effective on long, open runs. In urban areas, 12-24 inches is common, while rural or high-traffic zones may require 24-48 inches to provide. Any damage may alter the characteristics to the extent that the cable section may have to be replaced.
