

A duplex fiber optic coupler is connected to a single fiber optic cable

Overview

A duplex fiber-optic connector connects to two optical ports, whereas a simplex connector connects to a single optical port. The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch panels, by bridging the gap between their internal glass fibers that transmit the data down the length of the cable. Usually, optical signals are attenuated more in an optical coupler than in a connector or a splice because the.
