

Application of Distribution Network Automation Simulation System

Overview

Abstract—Distribution automation is the most effective means to improve the quality and reliability of power supply. The RTDS Simulator allows engineers to model the behaviour of distribution networks over a large frequency range in real time. ETAP Power Distribution System software offers integrated Distribution Network Analysis, Utility Distribution Planning and Advanced Distribution Management System (ADMS). Gers is President of GERS, a consulting engineering company specialized in power systems. In 2024 International Conference on Power Electronics and Artificial Intelligence (PEAI 2024), January 19-21, 2024, Xiamen, China.

Application of Distribution Network Automation Simulation System

Design and Application of Distributed Feeder Automation Simulation

Aiming at the difficulty of effective and quick functional testing and verification of distributed feeder automation in distribution network, this paper designs
