Overview

Many fiber internet problems come from dirty connectors or loose plugs, not major faults. Power cycling or restarting your ONT (Optical Network Terminal) often resolves simple troubleshooting internet issues. So if you want to know how to keep your cable internet working during a power outage, then this article is for you. First, check the basics—look for power issues on your optical network terminal and inspect all cables for visible damage. Fiber optic cables are the backbone of modern industry and communication, but even the most advanced networks can run into.
