

# **Broadband fiber optic connection keeps dropping**

## Overview

---

If a device keeps losing connection, resetting its network settings can help clear glitches. Alternatively, upgrade your broadband to full fibre broadband or a faster speed. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. Hi I have had numerous problems with my full fibre broadband in the last few weeks I thought it had eventually been fixed by Openreach Friday just gone but the connection keeps dropping even though all 3 lights are on the modem, surely this points to a faulty line into my house, how would I go. We can try to address the issue ourselves by moving our router and checking internal connections. Why is my internet not working properly?

Ever wondered why your blazing-fast fiber optic internet suddenly slows to a crawl, or why your network connection drops out just when you need it most?

You're not alone.
