

Cable buried in cable tray

Overview

Tray cables can be buried underground, but only if they are specifically designed and rated for direct burial. The biggest difference is how they're installed—trays are exposed, trenches are buried. Cable trays and cable trenches are two widely used methods for organizing and protecting electrical cables in industrial, commercial, and residential setups. Installation of Cable in Cable Trays involves precise routing on support systems, NEC/IEC compliance, grounding, ampacity derating, bend radius control, segregation of services, fire safety, labeling, and reliable cable management for industrial and commercial facilities.
