

Cable tray bends turned outwards

Overview

A box type cable tray vertical outside bend is a fitting used to change the direction of a cable tray system vertically, typically at a 90-degree angle, directing cables outward. Since the jaws of the bolt cutter drags a layer of zinc across the cut end and forms a protective layer. How to calculate cable tray bends?

Calculate the minimum required bend radius by multiplying the cable's outside diameter by its bending factor (e. They come in various configurations, including horizontal bends, vertical bends, and tees.
