

Cable trays in ore dressing plant

Overview

Cable trays should be sized to accommodate various media, and dividers should be used as necessary. The tray system should be flexible enough to be adjusted on site to avoid the many unforeseen obstructions under the raised floor such as chilled water pipe. Many different types of cables are used in industrial plants to supply power or transmit data between individual areas such as control cabinets, control units or machines. Scope :- This specification covers the following major activities; - Fabrication and installation of Mild Steel (MS) support structure for Galvanized Iron (GI) Cable tray. A well-designed cable tray system is vital for keeping your factory running smoothly and safely.
