

Can a whole-house fiber optic connection be replaced with a router

Overview

The good news is that once you're set up with an ONT, you're good to go for the future—you can simply plug any wireless router you like into its Ethernet port to set up a wireless fiber home network. When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds. Did you know that using your own modem and router can improve internet speeds, offer far better performance, and save money?

We show you how compatible modems and WiFi 7 routers will get the best out of your internet connection. A key aspect of upgrading to Full Fibre broadband is ensuring you have the right router. Full Fibre connections involve fibre-optic cables running directly into your home, delivering higher speeds and more consistent connectivity than traditional broadband.
