

Checking Access Points on Switches

Overview

Here are some basic steps that you can perform to troubleshoot the AP: Check the LED blinking pattern to identify possible errors. It provides direct access to the AP's configuration and status, allowing for quick diagnosis and resolution of issues. Access points must be discovered by a switch before they can become an active part of the network. You can use the status LED on your AP to determine some of the issues—for example, connectivity issues.
