

Color of bundled pigtails

Overview

For ease of identification, these pigtails will come in 12 different colours and are used to be optically spliced with the optical fibers from the optical cable to enable network connection. Characterized by having an optical fiber connector on one end and a bare fiber end on the other, they are primarily used to connect optical transceivers or other optical. Offering an extensive range of optical pigtails for use in FTTx, telecommunications, data communications and CATV applications.
