

# **Configure the management port IP of the core switch**

## Overview

---

By default, the management interface on the management port is enabled. The Ethernet management port, also referred to as the Gi0/0 or GigabitEthernet0/0 port, is a VRF (VPN routing/forwarding) interface to which you can connect a PC. To deploy this switch effectively and ensure trouble-free operation, you should first read the relevant sections in this guide so that you are familiar with all.

## Configure the management port IP of the core switch
