

# **Does the optical module have to be the same brand as the switch**

## Overview

---

Optical transceiver modules of different brands can be interconnected as long as the standards are the same. When it comes to the connection between two fiber optic transceivers, the following four factors should be taken into considerations: wavelength, speed, fiber type, and the connection to switches. In a fiber link, the data is transmitted from one end to another, and fiber transceivers are. Describes what an optical module is and FAQs, including the fundamentals, appearance and structure, key performance counters, common types, and naming conventions of optical modules, causes of optical module failures and corresponding protection measures, types of optical modules supported by.
