

# FDDI Connector

Length:40.5mm  
Small-end inner diameter:2.0mm  
Large-end inner diameter:6.0mm  
Outer diameter:7.5mm

## Overview

---

Designers normally constructed FDDI rings in a such as a "dual ring of trees". Host computers then connect as single-attached devices to the routers or concentrators. It was also later specified to use copper cable, in which case it may be called CDDI (Copper Distributed Data Interface). The American National Standards Institute (ANSI) developed a standard that provides for flexible, robust high-performance local area networks. Everything your business needs to collaborate—in the world's first unified, purpose-built suite for hybrid work.

## FDDI Connector

---

### Fiber Distributed Data Interface

FDDI (Fiber Distributed Data Interface) is another ring-based network, unlike Token Ring. It is implemented without hubs, although you can use devices

## Fiber Distributed Data Interface

OverviewTopologyDescriptionFrame formatDeploymentStandards

Designers normally constructed FDDI rings in a network topology such as a "dual ring of trees". A small number of devices, typically infrastructure devices such as routers and concentrators rather than host computers, were "dual-attached" to both rings. Host computers then connect as single-attached devices to the routers or concentrators. The dual ring in its most

degenerate form simply collapses into a single device. Typically, a computer-room contained the whole dual ring, although some implementations de
