Fiber-optic cable

Overview Design Performance Cable types Color coding Hybrid cables Inner ducts See also

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube suitable for the environment where the cable is used. Different types of cable are used for fiber-optic communication in different applications, for example

Fiber-optic cable

History Uses Principle of Operation Mechanisms of Attenuation Manufacturing Practical Issues External Links Guiding of light by refraction, the principle that makes fiber optics possible, was first demonstrated by Daniel Colladon and Jacques Babinet in Paris in the early 1840s. John Tyndall included a demonstration of it in his public lectures in London, 12 years later. Tyndall also wrote about the property of total internal reflection in an introductory See more on en.wikipedia LAPP
