

# **Fabrication of pigtails of any length**

## Overview

---

A pigtail is a coiled or looped section of tubing used in piping and instrumentation systems to absorb vibration, manage thermal expansion, and protect pressure instruments from direct exposure to process media. Moreover, its curved design allows it to flex under temperature or pressure changes. Utilizing superior tube bending technology and expert silver brazing, heli-arc welding and automatic tube welding processes, GFP provides both. Burst pressure ratings for pigtails are determined at room temperature with the hose in a straight line. The project was critical in terms of high chrome alloy steel welding during fabrication and installation, performing the pigtail. Disclaimer: Always use multiple sources and do your homework before performing any electrical work.
