

Fiber Optic Cable Laying between China and Europe

SC connector

X 12

Overview

Chinese state-owned telecom companies are planning a large undersea fiber-optic cable network called EMA (Europe-Middle East-Asia). The \$500 million project, led by China's HMN Technologies, will connect Asia, the Middle East, and Europe. This visualization shows the growth of the undersea cable network, global internet peering capacity, and the distribution of IP addresses via BGP announcements over time. The Submarine Cable Map is a free and regularly updated resource from TeleGeography. Fibre-optic Link Around the Globe (FLAG) is a 28,000-kilometre-long (17,398 mi; 15,119 nmi) fibre optic mostly- submarine communications cable that connects the United Kingdom, Japan, India, and many places in between.

Subsea cables and their importance, explained

What are subsea or undersea cables? They are fibre-optic lines laid on the ocean floor, to transmit multiple terabits of data per second between continents.
