

Fiber Optic Cable Splicing in Telecommunications

Overview

Fiber optic cable splicing is the process of joining two fiber strands in order to maintain signal quality and continuity over long distances. Precision in this process is critical to ensure minimal signal loss and to preserve the inherent speed and capacity of fiber optic networks. Optical fibers are made comprised of exceedingly tiny strands of glass or plastic and these cables transfer information between two sites using completely optical.

Fiber Optic Cable Splicing in Telecommunications

Fiber Optic Cable, Clamps, Boxes, for FTTH

JERA LINE-China Factory produce high-quality fiber optic cables, fiber cable clamps, and fiber optic boxes for outdoor & Indoor FTTH. ISO 9001 certified.
