

# Fiber Optic Channel Transition Plate

## Overview

---

The Transition Plate aids in compliance with ANSI/TIA/EIA-568B bend radius requirements. Designed to promote a gradual, controlled bend for both UTP and optical fiber cable. FOP can be used as Optical Isolator and Filter; it can absorb stray light during transmission and improving the SNR (signal to noise ratio). When an FOP is used as the light-receiving surface of a camera, it prevents the image sensor in the camera from de-teriorat low NA (numerical. NG4access ® Cabled Modules available in all module sizes and fiber counts up to 864 fibers NG4access ® Splice Tray Four sizes of interchangeable Propel fiber pass-through adapter packs provide the breadth of capabilities for virtually any configuration.

## Fiber Optic Channel Transition Plate

---

### Indoor Transition Splice Architecture

When transitioning fiber and cable from outdoors to indoors, operators require a rugged enclosure that is optimized for quick re-entry and network expansion. The
