

Fiber Optic RF Adapter

Overview

RF-over-fiber modules transport RF signals over optical links to reduce coax loss and extend distance, using linearized transmit/receive optical chains. They are specified by RF bandwidth, dynamic range, connectorization, and optical power. The FiberLink plus series incorporates standard (non-redundant), N+1/N+2 and 1:1 redundant solutions suited for indoor and outdoor. Remote Monitor & Control for enclosed modules is via an USB interface and includes. The RF over Fiber (RFOF) system is designed to create a high-performance RF link between two locations using fiber optic cables.

Fiber Optic RF Adapter
