

German-imported liquid-cooled switch 200G

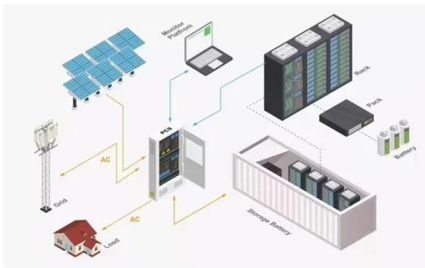

Overview

NADDOD 200G InfiniBand and ethernet liquid/immersion cooling transceivers with the transmission distance of 100m adopt leading hermetic sealing technology, compatible with mainstream cooling fluids, switches, and NICs. FS 100/200G PicOS® switches offer high speeds and port densities to meet the network deployment requirements of various scenarios, including core layer applications, and the evolving requirements of enterprise networks. A full suite of liquid cooling options is now available across our data centre portfolio, capable of meeting the demands of the most powerful AI and high-performance workloads. Berker S1 is only one product line by Berker we have permanently in stock for our customers. These switches are widely used across consumer electronics, industrial controls, and precision devices due to their balance between tactile feedback and resistance to accidental activation. FS 100/200G bare metal switches with high-performance switch chip provides powerful hardware switching capacity and data center features (supporting stacking, MLAG, PFC, ECN, VxLAN, EVPN, Multihoming, etc) when equipped with PicOS® software, making them ideal for cloud data center network.
