

Germany lays optical cables

Overview

Zayo Europe has deployed Ciena's optical technology to launch a new German network covering 3000 kilometers of fiber optic cables in eight core domestic metropolises, including Frankfurt, Munich, Hamburg, Dusseldorf, and Berlin. The nationwide fibre rollout is crucial for Germany's competitiveness and digital progress. In mid-2024, only 23 percent of households were connected to the fibre network (homes connected), and only 11 percent had booked a fibre connection. Yet this tranquil eastern German town is now on the fast-track to the future thanks to SPIE's specialised cable-laying operation WirliebenKabel. The fibre-to-the-home (FTTH) project is halfway through an eighteen-month timeline to deliver fibre-optic internet to Leisnig's 8,500 inhabitants. In the highly competitive market for broadband and mobile connections, the potential for political disputes remains high: Deutsche Telekom's competitors want to use the upcoming gradual shutdown of DSL copper lines to expand their market share.
