# HBA Fibre Channel Card

## Overview

---

FC network card: also commonly called fiber channel network card, stand for Fiber Channel HBA. The transmission protocol is a Fibre Channel protocol, which is typically connected to a Fiber Channel switch via a fiber optic cable. HBA is the I/O adapter that connects the host I/O bus to the computer's memory system. According to this definition, like a video card is connected to the video bus and memory, the network card is connected to the network bus and memory, SCSI-FC card is connected to the SCSI or FC bus and memory. Designed for rapid server deployment and orchestration, QLogic® products enable flexible operation with concurrent FCP and FC-NVMe. Emulex SecureHBAs introduce a cost-effective, easy-to-manage solution that encrypts all data in-flight (EDIF), protecting data as it moves across databases, applications, servers, and storage. Moving to 16 Gb technology provides the infrastructure required for the more powerful servers and.

## HBA Fibre Channel Card
