

High Temperature Resistant Steel Cable Trays for Mining

Overview

From oil platforms to food production facilities and tunnel infrastructure, molybdenum- containing stainless steel trays deliver exceptional performance, with unmatched resistance to corrosion and high temperatures. From the blistering heat of the Mojave Desert to the sweltering temperatures of foundries, cables need to be supported to ensure reliable power and communications. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl wiremesh, ZnMg metal cable trays and accessories and ZnNi screws and bolts. When it comes to choosing cable trays for a mining environment, several factors need to be considered, such as the type of mining operation, the specific environmental conditions, and the requirements of the cables. Hot-dip galvanized coating provides excellent protection against rust and corrosion.

High Temperature Resistant Steel Cable Trays for Mining

Stainless steel tames wild wires

Molybdenum-containing stainless steel cable trays, with their exceptional resistance to corrosion, high-temperature stability, and hygienic properties, are essential where reliability and durability are critical.
