

How far apart are the distribution boxes

Overview

While there is no one-size-fits-all answer, general guidelines suggest that the distribution box should be placed between 5 to 10 feet away from the septic tank. A distribution box, also known as a D-box, is a small underground chamber that channels effluent from the septic tank to the leach field lines. The primary function of the diverter box is to ensure that wastewater is evenly distributed. Understanding the appropriate distance between these two components is essential for ensuring optimal performance and longevity of the system.
