

How long is the lifespan of a laser diode

Overview

Laser diodes are highly durable but their lifespan depends on usage, environment, and maintenance. On average, they last 10,000 to 50,000 hours under normal conditions, though some can exceed 100,000 hours with proper care. However, there are reasons for running below 100% duty in order to increase the potential diode longevity. Rule of Thumb: For many standard telecom and industrial laser diodes, the operating lifetime is roughly cut in half for every 10°C increase in junction temperature.

How long is the lifespan of a laser diode

What is The Lifespan of A Laser Diode Module?

A laser diode is a specific type of light-emitting diode and its lifespan can be many years. In practice, two key factors determine a laser module's lifespan: its application usage and inherent
