

# **How many megabits Mbps should be used for a 100Mbps fiber optic connection**

## Overview

---

A good rule of thumb is that download speeds of at least 100 Mbps and upload speeds of 10 Mbps are widely considered fast enough to handle nearly any online activity. To put it into perspective, a 1GB file would take approximately 80 seconds to download at this speed. Determining the adequacy of a 100 Mbps internet connection requires a nuanced understanding of its capabilities and limitations in the context of modern bandwidth demands. While seemingly straightforward, evaluating 'good' necessitates considering various factors beyond raw throughput, including.

## How many megabits Mbps should be used for a 100Mbps fiber optic
