

# **How many years do optical cables last in the telecommunications industry**

## Overview

---

If installed and protected correctly against technical and environmental conditions, they can last: 25–50 years (outdoor plant infrastructure, long-haul wiring) 15–30 years (indoor building wiring systems) 10–20 years (FTTH plant drop). Fiber optic cables have a reputation for their prolonged lifespan, low maintenance need, and dependable quality. From FTTH optics to industrial applications, backbone transmission, and cloud data centers, fiber cables can last for decades under appropriate installation and handling. Q2: What tools are used for monitoring fiber optic performance?

Tools like OTDRs, optical. Thus, understanding the full lifecycle of fiber optic cables is essential not only for.
