

How much fiber optic cable needs to be stripped

Overview

This coating must be removed, as the fiber end needs to be stripped down to the 125-micron diameter of the glass itself so that it will fit into a connector or splice housing. With a human hair possessing a diameter of roughly 90 microns, you can imagine the difficulties posed when. Stripping and preparing fibre optic cables for termination is a critical step in the installation and maintenance of fibre optic networks. That is, you cannot strip the above cable in one "go", the layers must be stripped. In our continuing discussion of installing FO cables, let's use a step-by-step approach in detailing how to strip and clean indoor and.

How much fiber optic cable needs to be stripped

VHO-cables.ppt

All fiber optic cables have strength members which are used to pull the cable with a swivel pulling eye. The strength members are usually made from aramid fibers like duPont Kevlar.
