

How to identify a 12-core armored optical cable

Overview

12 core armored fiber optic cable should be selected by fiber mode, core count, armor structure, jacket material, tensile strength, duct or direct burial route, reel length, test report, and quantity. B2B buyers should confirm application, quantity, quality standard, packaging, destination country. Armored fiber optic cable is a fiber core wrapped with a layer of protective "armor" (stainless steel armored tube) of the cable, this stainless steel armored tube can effectively protect the core from animal bites, moisture erosion or other damage. These cables are designed to endure extreme environmental conditions, physical strain, and potential interference. The 12-core GYTY53 is a double-sheathed, steel-armored fiber cable for outdoor and underground installations. It includes a central steel strength member, gel-filled loose tubes, water-blocking yarn/tape, corrugated steel armor, and dual HDPE jackets.
