

# How to identify breakpoints on an Optical Time Domain Reflectometer OTDR

## Overview

---

**\*\*Backscatter Level\*\***: This indicates the amount of light scattered back towards the OTDR over the entire length of the fiber. Measurements have simplified the development of new analytical and 'intelligent' testing capabilities. Reflectometers can now automatically perform link and feature recognition of the items in use, setting the optimal acquisition conditions (wavelengths and pulse duration), consolidating the. It operates similarly to an electronic time-domain reflectometer, but instead measures the optical properties of a fiber under test.

## How to identify breakpoints on an Optical Time Domain Reflectometer

---

### Mini OTDR 20Km

It combines the functionalities of an Optical Time Domain Reflectometer (OTDR) and a Visual Fault Locator (VFL) to accurately identify and locate faults, breakpoints, and connection issues in FTTB
