

# How to make corners in a mesh cable tray

## Overview

---

Unlike these rigid alternatives, wire mesh trays offer the unique ability to be cut and bent on site, allowing for seamless navigation around corners, columns, and those often tricky tight ceiling spaces. This flexibility not only simplifies the installation process but also helps to accommodate. When it comes to custom cable installations, the best way to cut and modify wire mesh baskets is to use the right tools and techniques to ensure a clean, secure finish without compromising the integrity of your cable support system. Depending on the type and version of mesh cable tray, as well as the corrosion protection used, the mesh cable tray systems can be ambient temperatures of - 20 °C to + 120 °C.
