

# How to read the wire number of a fiber optic cable

## Overview

---

Here is the most important information: 864F means the cable contains 864 fibers SM means singlemode fiber 250 means the fiber has a 250 micron buffer coating. We brought the cable back to our office with the intention of opening it up and creating a video about the construction of this modern high fiber count cable, but something got our attention. General OPGW Cable Code Format OPGW cable models typically follow a structured format: OPGW-XX -YY (ZZ;AA) ■ 2. The two-digit number listed next to the number of pairs provides the American wire gauge—or the cross-sectional area of a round wire (essentially the diameter). Per TIA/EIA standards, the following color coding applies for non-military fiber optic installations: Multimode OM1 = Orange or Slate (Watch for this! OM1 is not compatible with connectors for OM2/OM3/OM4) However: Per TIA 598-C, it is permissible to. This identification scheme follows the TIA/EIA-598, "Optical Fiber Cable Color Coding.
