

# How to strip the outer layer of a fiber optic cable

## Overview

---

Use the fiber stripper to cut off 2" (50mm) of the cable jacket and pull off the cut piece. Let's explain a little about common layers, and what's important to consider when stripping. In this instructional video, Bob Licari, Test Equipment Product Manager, demonstrates a simple way to strip optical fiber. Stripping and preparing fibre optic cables for termination is a critical step in the installation and maintenance of fibre optic networks. Step 1: Mark the armor (if the cable has armor) with the tip of your knife to note a length sufficient to expose the cable's ripcord, being careful not to go through the armor and cut the ripcords.
