

IT server room power distribution box

Overview

PDUs can have a horizontal or vertical form factor which defines how the device is to be installed into a server rack cabinet. Most PDU manufacturers offer a wide range of options including colour matched sockets and metal casings. Splitter boxes can be single or three phase (red or blue commando type sockets) and split a source of input power (mains power supply, uninterruptible power supply or generator) into multiple power sources with BS 4343 industrial sockets for load connection. The input cable is BS 4343 – IEC EN60309-2 and feeds a double-pole MCB protecting each socket.
