

Installation Instructions for 4-Core High-Density Fiber Distribution Box

Overview

This guide provides the full installation workflow for both the Client Module (Riser Cable Installation) and the Operator Module (Feeder Cable Installation), along with detailed instructions for PLC Splitter installation and patch cord routing between modules. The Centrix™ System is a high-density fiber management system that provides a balance of industry-leading density with innovative jumper routing. The equipment is used as a termination point for the feeder cable to connect with drop cable in FTTx communication network system. The fiber splicing, splitting, distribution can be done in this box, and meanwhile it provides solid protection and management for the FTTx network building. Outdoor FDBs must withstand challenging environmental conditions and generally offer: Distribution boxes come in various sizes to accommodate different connection requirements: Recommended Reading: How to Use Fiber Distribution Box Proper preparation ensures a successful installation: Gather the. However, because optical fibers are fragile and can be easily damaged by pulling, bending, or crushing, extra care must be taken when installing optical fibers in fiber optic distribution boxes.
