

Is the outdoor fiber optic cable multimode

Overview

With a wide range of outdoor fiber optic cable types available, such as outdoor multimode fiber optic cables for short-distance connections and outdoor single-mode fiber for long-haul transmissions, each option offers unique benefits. Single mode fiber optic cable is made up of a small diameter glass or plastic core surrounded by cladding, which is a layer of reflective material. Whether you're linking buildings, running broadband in rural areas, or building 5G infrastructure, the right cable matters. Unlike copper cables, which depend on electrical signals, fiber leverages light to convey.
