

KVM Switch Screen Switching Latency

Overview

High-end KVM switches add negligible input lag (often $<1\text{ms}$) that is imperceptible in competitive play. Budget or older KVMs can introduce delays exceeding 2-3ms, hurting your reaction times. The primary benefit of a KVM switch is the consolidation of hardware, which leads to saving physical space and reducing the need. This is super useful for people who have more than one computer but don't want the hassle of switching between different. I'm planning to buy the ASUS ROG Swift PG32UCDM, also for its built-in KVM, and I want to use it with my Wooting 60HE and DeathAdder V3 Pro.
