

Latest National Standards for Electrical Cabinet Wiring

Overview

BS 7671, the 18th edition, is the prevailing standard for electrical installation and wiring safety across domestic, commercial, and industrial properties in the UK. Listed below are some commonly used electrical standards and approved codes of practice. Additional standards and codes of practice would generally be needed to satisfy a specific application - it is the responsibility of the specifier to select and apply these. This guide gives you a clear, up-to-date overview for 2025: who the regs apply to, what they cover (and don't), how they link to Building Regulations and the Electricity at Work Regulations, the current 18th Edition with recent changes, and the essentials on RCDs, AFDDs, SPDs and bonding. On 15 April 2026, the IET and BSI officially published ****Amendment 4 (A4:2026)**** to the 18th Edition Wiring Regulations. Effective from 1st January 2019, it covers circuits supplied at nominal voltages up to 1000V AC or 1500V DC, including Extra Low.
