

Lifespan of Access Switches

Overview

Network equipment such as routers, switches, firewalls, and wireless access points typically have a lifespan of 3 to 5 years. While some components may last longer with proper maintenance, technology is advancing at a rapid pace, and your equipment may quickly become obsolete. On average, the life cycle of a Cisco enterprise switch is 5-7 years (based on Mean Time Between Failures). The lifespan of a network switch can vary depending on several factors, including the quality of components, environmental conditions, usage patterns, and maintenance and upkeep.

Lifespan of Access Switches

How Long Does Networking Equipment Really Last?

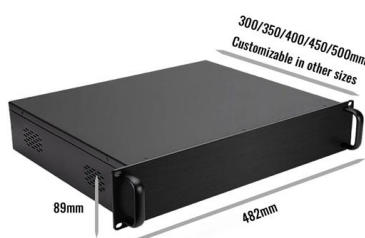

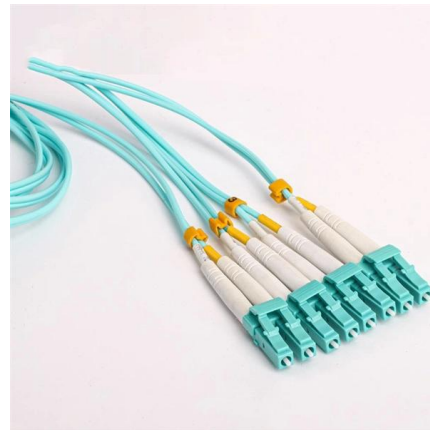

Dust accumulation, overheating, and wear-and-tear on moving parts can all shorten the lifespan of your devices if not addressed promptly. Regular
