

Lifting and lowering distribution box device

Overview

An Electric Box Lifter is a motorized lifting device designed to raise, lower, and transport boxes or other packaged goods with minimal human effort. The box lifter is known for their precision, which greatly assists in the picking and placing process. Infinitely variable height adjustment is included as standard in all our models and enables precise and safe height adjustment for lifting heavy loads. NERAK Continuous Vertical Conveyors (CVCs) are used to elevate or lower containers, boxes, trays, packages, sacks, bags, luggage, pallets, barrels, kegs, and other articles with a solid surface between two levels, quickly and consistently at high capacity; on automatically loading platforms, in "S".

Lifting and lowering distribution box device
