

Metal cable tray manufacturers process

Overview

Cable tray manufacturing relies on a coordinated production line of specialized machines: a roll forming line shapes the profile, a CNC press brake handles secondary bending, a punch press creates mounting holes and ventilation slots, and a shearing line cuts the finished tray to. **Material Selection** The first step in cable tray manufacturing is choosing the right material. ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia. Metal cable trays are designed to support and organize electrical cables in commercial, industrial, and residential buildings.
