

Mixing PoE switches and regular switches

Overview

In addition, many PoE switches can automatically disable the PoE part of the signal for ports that do not need/request/support it, making them more power-efficient. PoE devices are network equipment that can send out or receive the PoE power along with data, such as PoE switches, IP cameras, wireless access points, while non-PoE devices can only. As a leading PoE switch manufacturer, Howeision helps system integrators and network builders deploy robust, cost-effective solutions. But is it possible to use the POE switch as a standard switch?

Of course, it is doable! But, depending.

Mixing PoE switches and regular switches

Mixing POE and Non-POE Devices

Yes, this is done all of the time (mixing of PoE and non-PoE devices on the same switch). Some switches even support powering down the PoE part on switch ports if necessary.
