

Moving beam splitter 18

Overview

The BS018 is a non-polarizing beamsplitter cube designed for use in the 1100-1600nm wavelength range, offering a 50:50 reflection to transmission ratio. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in order to minimize ghosting and interference effects. FTIR spectrometer is generally based on Michelson interferometer where one of the mirrors is movable. Both unmounted versions, in sizes of 5 mm, 10 mm, 1/2", 20 mm, 1", and 2", and mounted versions, compatible with our 16 mm or 30 mm Cage Systems, are available. Press space again to drop the item in its new position, or press escape to cancel.

Moving beam splitter 18

Beam Splitters - optical power splitter, beamsplitter, thin

Beam splitters are devices for splitting a laser beam into two or more beams. There are different types, including polarizing and non-polarizing versions.
