

# National Standard for Hot-Dip Galvanized Cable Trays

## Overview

---

Carbon steel used for cable trays shall be protected against corrosion by the following processes: Hot-dip galvanized zinc after fabrication in accordance with ASTM A123/A123M, Coating Grade 65 with an average zinc coating weight of 460 g/m<sup>2</sup> per side or coating thickness of 0. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Other common options are: Continuous (pre-galvanized) coatings - often called Sendzimir or pre-galvanized. , is a welded wire-mesh cable management system made of high-strength steel wire. It is essential to distinguish between the two main galvanizing processes for cable trays, as their zinc coating ranges and applicable standards differ entirely:

Process: Deposits a layer of zinc onto the steel surface through electrolysis.
