

Nic combines two independent switches

Overview

NIC Teaming in Windows Server 2022 allows you to combine multiple physical and virtual network interfaces into a single logical virtual adapter called NIC Team. The feature is available in Windows Server, Windows Full Desktop Experience (with GUI), and Server Core (without GUI). All the incoming traffic from the OS will pass through the virtual NIC and be load-balanced across the assigned physical network. 3ad, or Dynamic Link Aggregation, this teaming method uses the LACP protocol to understand the teaming topology. Network interface card (NIC) teaming and LAN on Motherboard (LOM) teaming can provide organizations with a cost-effective method to.
